AMENDMENTS TO THE CLAIMS

2

- (Currently Amended) An instrument for closing skin edges forming a wound, the instrument comprising:
- a pair of opposing, rotating wheels <u>enabling</u> the instrument to be pulled along a wound to progressively bring skin edges together; [[and]]

a breakable vial or fillable reservoir of glue; and

- a device to supply the glue to the skin edges being brought together.
- 2. (Canceled)
- (Previously Presented) The instrument of claim 1, wherein the wheels include barbs or other skin-engaging features.
- (Previously Presented) The instrument of claim 1, wherein the wheels are coupled to opposing manually operated buttons.
 - 5. (Canceled)
